

GSM GATEWAY ET08

ET08 provides a dial tone and fully replaces a fixed telephone line for Alarm Control Panel reporting to the central monitoring station in situations where a telephone landline is unavailable, cut or suspended by PSTN provider.

WHY CHOOSE ET08?

- Simulates fixed telephone line and replaces it fully where landline is unavailable.
 - Can reroute call to Alarm Receiving Centre via GSM network when it detects a loss of voltage on the PSTN landline.
 - Parse Contact ID protocol and text SMS for up to 5 users
 - Parse Contact ID protocol can be transferred by GPRS to ELDES monitoring software EGR100
- Can reroute call to Alarm Receiving Centre via GSM network when it detects a temporary suspension of service by the service provider (which may be for technical or billing reasons) even when a dial tone continues to be provided. (needs additional hardware)
